## Urine Stabilization Products

### **Cul-Tect™** **Urine Culture Stabilizer with Boric Acid/Sodium Formate**

#### **Stabilizes Urine for up to 72 Hours**

Cul-Tect™ features a unique boric acid/sodium formate tablet that protects the viability of urinary tract bacteria for quantitation, culture and identification. The dissolving tablet stabilizes urine specimens for up to 72 hours at room temperature without altering microbiological testing procedures. More effective than boric acid alone, it helps prevent the “over-growth” of incidental organisms (typically skin flora) that may accidentally be introduced into the urine sample. Formulated for gentle bacteriostatic action, it maintains the characteristics of cultures and subcultures.

Cul-Tect is convenient for remote specimen collection sites, where delays of a few hours can mean the difference between accurate and inaccurate results. It decreases the need for costly, time-consuming repeat sampling as well as the potential misdiagnosis of urinary tract infections.

Cul-Tect comes complete with boric acid/sodium formate tablets and patient identification labels affixed to each tube, vial and container. The ID labels contain ample space for writing the collection time, date, person’s name and specimen number. Special packaging is also available upon request.

### **Sedi-Tect™** **Urine Preservative System**

#### **Preserves Urine for up to 5 Days**

Sedi-Tect™ features a special urinary preservative tablet that maintains the formed elements found in urine sediment samples and the key diagnostic markers used in reagent strip (dipstick) testing. The time-release tablets dissolve and activate rapidly. Samples remain stable for up to 5 days and can be stored or transported at room temperature.

Sedi-Tect protects critical diagnostic indicators (WBCs, RBCs, casts, crystals and ova) from lysis and decay by controlling micro-organisms, osmolality and the pH. It is convenient for remote specimen collection sites, where delays of even a few hours can mean the difference between accurate and inaccurate results. Sedi-Tect also decreases the need for costly, time consuming repeat sampling.

Sedi-Tect comes complete with the urinary preservative tablets and is available in a variety of sizes. A patient identification label is affixed to each tube, vial and container. The ID labels contain ample space for writing the collection time, date, person’s name and specimen number.

**NOTE: Sedi-Tect contains mercury. Sedi-Tect is not for use as a urine culture preservative. Use Cul-Tect for this purpose.**
